Why FieldFX

Competitive Positioning And Differentiation

Domain Expertise

FieldFX is the de facto field service management software for the oilfield, industrial and environmental service industry. We understand the challenges our customers face, so we're able to help solve them better than anyone.

Complex Customer Pricing Management

The contracts FieldFX customers have in place with their customers are very complex, with multiple rules and attributes, often with varying price books based on numerous locations. Those contracts can be modeled in FieldFX, so that accurate quotes and tickets can be generated.

End to End Quote to Invoice

FieldFX ensures the four-way-match: that an accurate quote, produces an accurate ticket, which leads to an accurate invoice, with the price book serving as the common foundation for all.

Offline Capabilities

FieldFX connects the backoffice (accounting and management) with the field, which is often in a remote location without Internet connectivity.

Data Harmonization
